Wonder Electric NEWSLETTER

6th Issue · Sept. 2020

Wonder PM motor has a series of technical advantages, such as precise control, compact structure, low temperature rise, low vibration and so on, which make our products stand out in the fierce market competition and become the benchmark products of high quality and high efficiency motor in China.

Since 2011, Wonder motor has already reached the leading efficiency level of IE4, and has become the first domestic manufacturer of high efficiency motor to obtain third-party certification. As developed countries continue to improve the motor energy efficiency access standards, Wonder firmly seize the opportunity to export high-efficiency motor to the world.

Wonder Permanent Magnet Synchronous Motor-- First Choice for Energy Saving Renovation

The independent development and production of permanent magnet motor is an epitome of the innovative development of Wonder's exploration. Energy consumption is one of the key elements for the development of the motor industry.

As a driving device for general mechanical equipment, Wonder permanent magnet synchronous motor (PMSM) has been highly recognized by air compressor customers again recently. The efficiency level of Wonder PM motor has reached IE5 and IE4. Compared with ordinary efficiency motor, the efficiency of some models of PM motor can even be increased by more than 10%, which will save a considerable amount of electricity cost for customers.

In addition, Wonder motors are differentiated by small and delicate appearance as well as flexible installation method. Thus, customers can easily replace the lower efficiency motors without complicated modification or maintenance, for the normal production of customers for more time, labor and capital.

More Than 2hrs At 400°C! Performance of Wonder Smoke Extraction Motor Highly Commended By Users

Although the current epidemic has restricted the flow of people from various countries, it has not prevented the good reputation brought by the powerful performance of Wonder smoke extraction motor. In September, a new batch of high-temperature motor was successfully exported!

Wonder smoke extraction motor is designed for fire ventilation systems and can be operated at room temperature or high temperature. Under normal conditions, it works with the ventilation system to ensure the air flow in the enclosed space. In case of emergency fire, even under the high temperature of 400°C, it can continue to operate for more than 2 hours. The fire protection system can quickly discharge the high temperature and harmful gases in the space, opening a safe passage for personnel evacuation and firefighting, and protecting the machinery and equipment safety, reducing the secondary damage caused by high temperature.

In order to adapt to different application scenarios, Wonder has detailed customized services to choose, such as: variable frequency drive, anti-corrosion materials, various installation and coupling methods, thermosensitive resistance accessories, multi-speed motor and so on.

Wonder Electric will continue to provide strong and continuous power for fire ventilation systems assembled in large buildings, channels, factories, shopping centers, warehouses, enclosed parking lots and other occasions!

Singaporean Friends visited Wonder With Opportunities Of Cooperation

On Sept. 16th, Mr. Nelson NG, Consul-General of The Consulate-General of The Republic of Singapore in Xiamen, Ms. Vicky Qi, Assistant, as well as Mr. Wee Kim TAN, Regional Director of The Guangzhou Office of Singapore Economic Development Board visited the factory of Wonder Electric together.

Consul-General NG visited motor production lines, R&D center, product sample room and other places in Wonder, and learned that Wonder has been focusing on design and production of high efficiency motor for more than 30 years, and that our products have won unanimous praise in domestic and foreign markets. Wonder Electric has been operating in Singapore and Malaysia for many years, providing high quality products and services to customers in Southeast Asia and around the world. Wonder's investment in the local operation has also been highly praised by the local government.

Consul-General NG and Director TAN introduced the investment attraction policy of the Singapore government and the development direction of the bilateral economic and trade cooperation between the Singapore government and the Fujian Provincial government.

Wonder will seize more development opportunities, and actively promote the quality products and services of Wonder brand to the world.

Lisong Training of Safety, Quality and Operation

On September 30th, Lisong Metal Industry Co., Ltd. conducted a training on safety, quality and operation, and the main persons in charge of all departments and employees of the company participated in the training.

Director Chen of Administration Department, in accordance with the requirements of the company's system, combined with real cases in the industry, to conduct safety education for each batch of new employees. Through learning, all employees have a detailed and profound understanding of the management of production safety and fire emergency escape knowledge.

Mr. Liu, Vice Manager of Quality Management Department, and Mr. Ruan, GM of Lisong, reviewed and summarized the achievement of quality objectives and overall operation of each department of the company, and put forward questions, in-depth analysis and positive outlook. Mr. Ruan mentioned that we must establish a sound quality assurance system, and improve the company's management and planning ability, so as to maintain and expand the advantages of quality, and make Lisong brand stand out in the fierce industry competition.
